

Prince Ude *Platform and Infrastructure Engineer*

ude.princdev@icloud.com | Lagos, Nigeria | ude-p.github.io | linkedin.com/in/prince-ude

SUMMARY

Platform and infrastructure engineer building and operating low latency backend systems and production infrastructure in Go and Kubernetes.

Built and operated infrastructure for a multiplayer platform serving **600k+ players**, with game servers supporting **500–1,000 concurrent players per node at ~42ms p99 tick latency**. Experienced across AWS, Kubernetes, OpenTofu, Linux, networking, distributed systems, observability, and infrastructure automation, with ownership spanning backend services, compute, storage, networking, deployments, and production operations.

SKILLS

Language & Data: Go, PostgreSQL, TimescaleDB, Redis

Cloud & Infrastructure: AWS, EC2, EBS, VPC, S3, CloudFront, Route 53, IAM, SSM, CloudWatch, OpenTofu

Kubernetes & Platform: Kubernetes, k3s, controller-runtime, client-go, CRDs, Operators, Helm, Cilium, Longhorn, CloudNativePG

Observability & Networking: OpenTelemetry, Grafana, pprof, Pyroscope, gRPC, WebSockets, Protocol Buffers, NATS

CI/CD & Automation: GitHub Actions, Ansible, Docker, ko, GHCR

EXPERIENCE

Backend and Infrastructure Engineer

02/2024 – Present | Abuja, Nigeria

WHOT Studios

- Own backend systems and production infrastructure for a multiplayer platform serving **600k+ players**, with game servers handling **500–1,000 concurrent players per node at ~42ms p99 tick latency**.
- Designed and operated AWS infrastructure using **EC2, Graviton, EBS, VPC, S3, CloudFront, Route 53, IAM, SSM, and CloudWatch**, provisioned declaratively with **OpenTofu**.
- Reduced compute costs by approximately **25%** by migrating workloads to **Graviton**, while using Spot capacity and committed baseline capacity for further infrastructure efficiency.
- Built a cost efficient Kubernetes platform using **k3s on EC2**, avoiding unnecessary EKS control plane costs and using **VPC Gateway Endpoints** to keep S3 and DynamoDB traffic off NAT infrastructure.
- Operated PostgreSQL on Kubernetes with **CloudNativePG and EBS**, and designed private networking to isolate stateful workloads without unnecessary outbound internet infrastructure.
- Built real time backend services in **Go** using **WebSockets, gRPC, and NATS**, with PostgreSQL and Redis for persistent state, caching, and low latency data access.

Systems Reliability Engineer

08/2022 – 02/2024 | Lagos, Nigeria

Gtrac Services Ltd

- Operated backend infrastructure supporting **3,500+ concurrently connected vehicles**, processing real time GPS telemetry with **sub second alerting** for geofencing and fleet events.
- Built Go backend services and PostgreSQL/TimescaleDB ingestion pipelines for telemetry collection, geofencing, alerts, and fleet reporting.
- Designed data ingestion and processing workflows for continuous GPS telemetry, supporting real time operational events and historical fleet analytics.
- Managed containerized Linux infrastructure and automated deployments through GitHub Actions, reducing manual release and operational work.

PROJECTS

appd – Kubernetes Deployment CLI & Operator

- Built a Go CLI and Kubernetes operator using **controller-runtime** and **client-go** that reduced workload deployment to a single HCL resource instead of manually maintaining Kubernetes manifests.
- Implemented reconciliation, **drift detection**, **resource pruning**, **rollout health checks**, and Vault/External Secrets integration across Deployments, StatefulSets, Services, Jobs, ConfigMaps, Ingresses, and Namespaces.
- Ran the operator in production across multiple services for **4+ months**, providing a standardized deployment interface for application workloads.

Cash.io – Multiplayer Backend

- Built multiplayer game servers in Go with **room lifecycle management**, **state synchronization**, **WebSockets**, and **Protocol Buffers**.
- Used **pprof** and **Pyroscope** to profile goroutine pressure, WebSocket backlogs, memory allocations, and serialization overhead in latency sensitive workloads.

EDUCATION

Landmark University

2016 – 2020 | Kwara, Nigeria
