

Prince Ude

Backend and Infrastructure Engineer

✉ ude.princdev@icloud.com 📍 Lagos, Nigeria 🔗 ude-p.github.io 🌐 linkedin.com/in/prince-ude

SUMMARY

Backend and infrastructure engineer building and operating backend systems in Go on self-managed Kubernetes. Experience spans high-concurrency game backends serving 600k+ players, real-time telemetry pipelines for 3,500+ connected devices, and a production Kubernetes operator adopted across multiple services. Comfortable owning systems end to end, service code, cluster infrastructure, networking, and observability.

SKILLS

Language & Data: Go, PostgreSQL, TimescaleDB, Redis

Kubernetes & Platform: controller-runtime, client-go, CRDs & Operators, k3s, Helm, Cilium, Longhorn

Infrastructure & CI/CD: Ansible, Terraform, Linux, GitHub Actions, ko, GHCR, AWS (EKS, EC2, ECS, Fargate, ALB)

Observability & Networking: OpenTelemetry, Grafana, pprof, Pyroscope, gRPC, WebSockets, Protocol Buffers

EXPERIENCE

Backend and Infrastructure Engineer

02/2024 – Present

WHOT Studios

Abuja, Nigeria

- Own backend and infrastructure for a game platform serving 600k+ players, running Go services that handle 500–1,000 concurrent players per node at ~42ms p99 tick latency.
- Migrated production workloads from single server deployments to self managed k3s clusters, automated cluster setup with Ansible, and configured Cilium networking and Longhorn distributed storage.
- Built real-time services using WebSockets, gRPC, and NATS, with PostgreSQL and Redis for data storage and caching. Added OpenTelemetry and Grafana for tracing, metrics, and monitoring.

Systems Reliability Engineer

08/2022 – 02/2024

Gtrac Services Ltd

Lagos, Nigeria

- Kept systems reliable for 3,500+ concurrently connected vehicles, processing real-time GPS telemetry with sub-second alerting for geofencing and fleet events.
- Built backend services and PostgreSQL/TimescaleDB ingestion pipelines for GPS telemetry, geofencing, alerts, and fleet reporting.
- Managed containerized Linux infrastructure (Docker, Caddy) with deployments automated through GitHub Actions.

PROJECTS

appd — Kubernetes Deployment CLI & Operator 🔗

- Built a Go CLI and companion Kubernetes operator (controller-runtime, client-go) that deploys workloads from a single HCL resource, replacing hand-maintained manifests for Deployments, StatefulSets, Services, Jobs, ConfigMaps, Ingresses, and Namespaces.
- Added drift detection, resource pruning, rollout health checks, and Vault/External Secrets Operator integration; in production across multiple services for 4+ months.

Cash.io — Multiplayer Backend 🔗

- Built multiplayer game servers in Go with room lifecycle management, state synchronization, WebSockets, and Protocol Buffers.
- Profiled goroutine pressure, WebSocket backlogs, allocations, and serialization using Pyroscope and pprof.

Routenex — Fleet Tracking 🔗

- Built GPS tracking and telemetry services backed by PostgreSQL, TimescaleDB, and Redis, deployed on a self hosted k3s cluster.

EDUCATION

Landmark University

2016 – 2020
Kwara, Nigeria
